FRANKLIN PARK LAWN SEED

TRADE MARK REGISTERED

The Best Mixture for Sunny Lawns

Recognized as a quality mixture for those who want the best. Every good lawn begins with good seed. **Franklin Park Lawn Seed** is good seed. It is blended fresh every season from heavy, re-cleaned, live seeds of only those grasses known to be adapted to our soils and climate. A small amount of White Dutch Clover is included. It is free from worthless chaff. It is high in germination as tests will prove. **Franklin Park** is used extensively on lawns of fine homes and large estates, in parks and cemeteries all over New England. Under ordinary conditions, 1 lb. (1 qt.) is sufficient to properly seed 300 to 400 square feet.

Prices: 1/2 lb. 35c., 1 lb. (1 qt.) 65c., 4 lbs. \$2.40, 8 lbs. (1 pk.) \$4.40, 16 lbs. \$8.25, 32 lbs. (1 bu.) \$16.00, 100 lbs. \$48.00

PERRY'S SHADY SPOT LAWN SEED

There's no better mixture for sowing on the north side of buildings, between houses or under shade trees

Our **Shady Spot Lawn Seed** is specially blended from the best grasses it is possible to obtain for this purpose, only those that grow and flourish under shady conditions in their natural and wild state being used. We sell large quantities of this high grade mixture.

Prices: 1/2 lb. 35c., 1 lb. 60c., 5 lbs. \$2.50, 10 lbs. \$4.50, 20 lbs. (1 bu.) \$8.00, 50 lbs. \$19.50. Ask for prices on larger quantities

Postpaid in New England at above prices up to and including 20 lbs., when cash accompanies the order

This man is wise to sow the best Lawn Seed he can secure, **Perry's Franklin Park**. He knows that it pays to start right, that the first saving by using "cheap" seed is lost quickly by necessary replacement of a poor catch of inferior grasses.

HINTS ON LAWN PREPARATION

Practically every lawn presents an individual problem, but a few points are important to all.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always up-hill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June Bugs and Japanese Beetles, dig in also 8 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like **Vert** to each 1000 square feet, especially under trees.

Sow **Franklin Park Lawn Seed** in all sunny situations, *Shady Spot* elsewhere, at the rate of 1 lb. to every 300 to 400 square feet. Make sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas). Roll, if not sticky, with a water weight roller to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer.

We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high. Dig out promptly with a Sure Grip Weeder any weeds that may spring up from weed seeds that have been lying dormant in the soil. Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of **Franklin Park Lawn Seed** on hand for this purpose.

Bank and Terrace Mixture

Sow for Quick Results and Permanence

A splendid mixture of varieties with strong, deep-spreading roots of quick growth. Most effectual in binding loose soils, and preventing slopes from being washed out by rains. Blended for adverse conditions and to produce a fine, smooth, velvety sod of a beautiful rich green. Broadcast 25 lbs. of **Vert** to each 1000 square feet and rake in lightly. Sow 1 lb. of our Bank and Terrace Mixture to each 250 to 300 square feet and rake again lightly and firm with a roller or the back of a spade. On steep slopes it may be well to sow a quart of seed oats to each 2 lbs. of seed to help retain the surface.

Lb. 60c., 5 lbs. \$2.50, 10 lbs. \$4.50, 25 lbs. \$10.00

This man is happy for it is a pleasure to mow a fine lawn produced by sowing **Perry's Franklin Park Lawn Seed** on properly prepared soil enriched with **Vert**, a well-balanced plant food for lawns and gardens

THE LAWN, Dickinson—is the best book on the subject. \$1.25 postpaid

You will want to either reseed your lawn or repair it this Spring to keep your yard looking at its best. A good lawn and plenty of shrubbery about your home will go a long way toward keeping up appearances and maintaining the value of your real estate

Spike Tamp, or Sod Renovator

With this tool one can do on small lawns what the spiked roller does on golf greens—perforate the sod and pulverize hard soil for repair work. The small spikes make only small holes into which fertilizer and seed can drop. Reversed, the tool provides a handy tamper for firming the soil and placing it into close contact with the grass seed that germination may be doubly sure. Indispensable to everyone desiring a fine lawn, as well as landscape men, jobbing gardeners and others. Weight, 11½ pounds. \$3.50.

Perry's Special Purpose Grass Mixtures

Perry's Athletic Field Mixture

Admirably suited to all kinds of playgrounds that are subject to hard usage. All the grasses selected for this mixture are hardy, deep-rooted and wear-resistant. You will appreciate the quality we blend into this mixture, and the excellence of turf obtained on soils well-prepared and properly cared for. Sow 150 lbs. per acre.

Lb. 65c., 5 lbs. \$3.00, 10 lbs. \$5.50, 25 lbs. \$12.50, 100 lbs. \$48.00.

Perry's Bent Grass Mixture

For Those Who Appreciate Quality

A beautiful green lawn is the ambition of most home owners. Bent grasses make beautiful lawns in New England when given the necessary attention. More and more attention is being focused on Bent grasses because of the interest in golf clubs where so much Bent seed is used. To satisfy this demand we offer this mixture blended from a formula employing these fine bladed Bent grasses and calculated to produce through creeping root stocks on rich soil a closely matted turf of soft luxuriance.

Prepare your soil with unusual care and fertilize with Vert at the rate of 25 lbs. per 1000 square feet. Do not attempt to reduce the cost of starting a lawn by economizing on seed. As a rule, lawns are not large and the difference in cost between light and heavy seeding is not great. Sow seed at the rate of 1 lb. to each 250 square feet to secure a thick stand at the beginning and to assist in holding weeds in check.

Several times during the season broadcast $\frac{1}{2}$ oz. of sulphate of ammonia mixed with six times its bulk of finely sifted soil to each square yard of surface.

Lb. \$1.25, 5 lbs. \$6.10, 10 lbs. \$12.00, 20 lbs. \$23.60, 50 lbs. \$58.00, 100 lbs. \$115.00.

Fair Way Mixture

Blended for Severe Conditions

This mixture is a combination of grasses of a dwarf spreading habit of growth, and unexcelled for laying out new fairways or for renovating old ones. Very carefully prepared and certain to produce a firm, permanent turf that will withstand severe usage and improve with age if properly cared for. Use 100 to 150 lbs. per acre, according to soil conditions.

Lb. 50c., 5 lbs. \$2.15, 10 lbs. \$4.00, 25 lbs. \$8.75.

Mixtures for Permanent Meadows or Permanent Pastures

For dry soils, medium soils, or heavy, moist land (specify which); 40 pounds sufficient to seed an acre.

Ask for prices.

Putting Green Mixture

For Ideal and Lasting Greens

There is a growing demand for a lawn grass mixture that will produce at home a turf as fine as on putting greens of golf clubs. For various reasons it is usually safer to sow a mixture of grasses than to depend upon one grass. To meet these needs we have prepared a formula from those superior grasses employed on golf courses—of known high purity and germination that the utmost of satisfaction may be secured.

We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

Lb. 90c., 5 lbs. \$4.40, 10 lbs. \$8.50, 20 lbs. \$16.50, 50 lbs. \$41.00, 100 lbs. \$80.00.

Perry's Seashore Mixture

**Many a Lawn along the New England Shore has
been grown from this mixture**

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of four inches should be broadcast, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 sq. ft.

Lb. 65c., 5 lbs. \$3.00, 10 lbs. \$5.50, 25 lbs. \$12.50.

White Dutch Clover for Lawns

This is the popular low, creeping Clover that almost everyone wants in his lawn seed mixture because its little pink blossoms look so pretty. Grows quickly and will cover many a bare spot with bright green and dense foliage should other grasses fail. Thrives almost anywhere, but at its best in wet seasons and on heavy, moist soils. Especially adapted to pastures and should be in every pasture mixture. The seed is fine, and 8 to 10 lbs. will sow an acre. We offer an especially high grade lot of seed.

$\frac{1}{4}$ lb. 20c., $\frac{1}{2}$ lb. 35c., 1 lb. 60c., 5 lbs. \$2.75, 15 lbs. \$7.50

QUALITY GRASS SEED

We offer only quality seed with known high purity and germination tests. Ask for prices on large quantities. **Postpaid only at one pound prices, bags extra at cost.**

"BLUE RIBBON" FLOWERS

FASCINATING ASTERS

624 **Aurora, Golden Sheaf.** You should enjoy growing this unusual variety with such charm as a cut flower. Others have admired it and remarked on its rare color, for Golden Sheaf is the nearest yellow Aster to date. Deep yellow in the bud, it turns to a rich cream on opening. Each long-stemmed, double bloom has a pronounced cushioned center of quilled petals, surrounded by longer, broad ones. Branching in type. 2 ft. tall. Wilt-Resistant.

Pkt. 25c., large pkt. 65c.

Imbricated Pompons. With more and more attention being focused on miniature forms of our foremost garden flowers, we believe our friends will take special interest in these novel Asters that bloom toward the end of August. The plants are upright, compact, about 15 inches tall, and bear numerous small, round, double blooms with full cushioned centers. Useful as pot plants or for bedding, though primarily grown for cutting. Often the whole plant is cut as a unit. Not Wilt-Resistant. Your choice, Separate Colors or Mixed, **20c., large pkt. 50c.**

DOUBLE DWARF CORNFLOWER

1960 **Jubilee Gem.** (Award of Merit, All America Selections, 1937). We offered this English flower seed novelty last year and it proved to be one of the finest of the season, and we can confidently recommend it again. One of the hardiest of annuals and adapted to general planting. Jubilee Gem possesses the same vivid and delightful shade of blue as found in our popular Double Deep Blue Cornflower (No. 1970). The quite bushy, dwarf plants present a handsome appearance when in their prime. A fine edging plant and a highly desirable one for the cool greenhouse. Plan for a continuous supply of blooms throughout the Summer by sowing in succession for several weeks. You will be greatly pleased with results. 12 inches.

AN EXTRA EARLY COSMOS

2273 **Sensation Mixed.** (Award of Merit, All America Selections, 1936). What a picture these 4 to 6 ft. bushy plants present in August when in full bloom! Not only do the mammoth flowers decorate the garden, but they are especially valuable as cut flowers, so large and graceful are they. Blooming within 10 weeks from the sowing of seed, Sensation has prime interest to gardeners admiring the chaste beauty of the Cosmos. Plant at least 3 ft. apart to let the plants fully develop and disbud, if you wish to increase the size of the flowers that normally are 4 inches across. Only pink and white colors, with an occasional red, will be found in the mixture. This variety is without a close rival. **Pkt. 25c., large pkt. 75c.**

EXCEPTIONAL PETUNIAS

5306 **Dainty Lady.** (Award of Merit, All America Selections, 1936) The closest approach to a yellow Petunia yet seen. Though judged last year, there was insufficient seed to allow its dissemination, but this year, we believe, there is a fair supply, so all can try it in some dry, sunny spot and enjoy its beauty. Its good-sized single, fringed blooms of a light creamy yellow, with a suffusion of golden yellow, give it a claim for attention. In habit the plants, perhaps 15 inches tall, are rather compact. Try it as border to Elk's Pride, the grand royal purple. **Pkt. 35c.**

5323 **Flaming Velvet.** (Gold Medal, All America Selections, 1936.) Plan to grow this outstanding rich, blood-red Petunia in a bed in full sunshine and see how lovely it is. In

the sunlight all its velvety texture and richness of the shade is brought out. It is a glorious variety of medium size for blossoms all Summer long to lend enchantment to your garden. Be sure to include it in your seed order. **Pkt. 25c., large pkt. 75c.**

A DWARF PERENNIAL GAILLARDIA

2978 **Goblin.** The first dwarf compact hardy perennial variety. Literally covered with beautiful, two-colored flowers, on stems long enough to be useful when cut. Especially suited to the rockery or as an edging plant in many perennial borders. If sown in March or April, the plants will flower the first year. **Pkt. 25c.**

FOR BRIGHTER GARDENS

GIANT IMPERIAL LARKSPURS

Tall and upright in habit, the Giant Imperial varieties have superseded all other types of Annual Larkspurs for open, sunny locations. The spikes are long and graceful, thickly set with double florets of utmost beauty.

3734 Gloria Improved. Provides a good mass of color, a rich deep rose on salmon. Early flowering. **Pkt. 25c., large pkt. 65c.**

3740 White King. A pure white of the largest size producing Hollyhock-like cutting spikes 24 to 30 in. long. Very early blooming. **Pkt. 25c., large pkt. 65c.**

DIFFERENT MARIGOLDS

4073 Sunset Giants. Equal Dahlia-flowered Zinnias in size, the largest Marigolds yet offered, and unique in having a sweet fragrance. These extra large blooms appear in such profusion and so bright as to easily become the showiest plants in the garden. Vivid shades of orange, deep and light yellow, and primrose comprise the colors found in these huge, loosely formed single and double flowers that have such rare value for the garden or for cutting. **Pkt. 25c., large pkt. 75c.**

4078 Tom Thumb "Golden Crown."

Imagine a dwarf Guinea Gold (the first of the Carnation-flowered types and easily the most popular Marigold ever introduced) and you have a picture of

this beautiful new sort in all its loveliness. Just as "Guinea Gold" set a new standard for tall sorts, so will this take first place among dwarf, large flowering varieties. 10 in. **Originator's pkt. 35c.**

4153 Harmony. Customers enthused over this distinct French variety last year, so freely did it bloom over such a long period, from early Summer to frost. Never before have we offered such a fine dwarf sort. Scabiosa-like, fully double flowers with high centers of deep orange surrounded by guard petals of dark maroon. 12 inches tall. **Pkt. 20c., large pkt. 50c.**

ANNUAL DWARF PHLOX

5395 Art Shades (Drummondii gigantea). (Award of Merit, All-America Selections, 1935). A truly giant-flowered strain of lovely pastel shades so many of our friends desire in their gardens. The enormous flowers up to 1½ in. in diameter appear in profusion on the 9-in. tall plants. **Pkt. 25c., large pkt. 60c.**

A LOVELY SCABIOSA

6484 Rosette. This radiant shade of deep rose is a glorious new color and one that ought to increase the popularity of these sweetly fragrant cut flowers. **Pkt. 25c., large pkt. 60c.**

RUST-PROOF SNAPDRAGONS

Just as Wilt-Resistant Asters have succeeded the ordinary strains, Rust-Proof Snapdragons are rapidly replacing others susceptible to that disease which often takes such toll in Milady's garden. Every garden maker ought to appreciate what commercial florists already know, that it pays to grow this rust-resistant strain. You ought to grow a bed of them this year. The varieties we offer are a choice selection of the many now available.

PERRY'S PRIZE ASTERS

Wilt most commonly occurs in the hot Midsummer months, just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The Remedy is to use **Wilt Resistant Strains** that have proven so valuable that wherever available we offer them to the exclusion of others. The Aster "yellows" is quite a different disease that can best be avoided by growing your crop under cloth to prevent infestation by the insects spreading it. Unless otherwise noted, all our seed is of a **Wilt Resistant Strain**.

PLANT PERRY'S HARDY LILIES

Most Lilies will succeed in any light, sandy or loamy soil, preferring an acid or a neutral soil. Plenty of Maplevale leafmold or decayed peat should be added to the soil, as practically all Lilies love leafmold. They are also partial to sharp, gritty sand. An excellent mixture is one-third loam, one-third leafmold or peat or combination, and one-third sand and well rotted cow or sheep manure.

Good drainage is an essential point. The preparation of the soil should be such as to provide ample moisture during the growing period, but without having an excess of water during the dormant period. When planting the bulbs it is well to surround them with sand or fine gravel. This helps to drain away surplus moisture and tends to repel worms.

Occasionally some Lilies do not appear above the ground the first year after planting, but come up strong and vigorous the second season.

For the most reliable information, consult **Lilies and Their Culture**. Craig. **\$3.15 postpaid.**

APPLES.

"Dormant Spray"—primarily to kill Scale.

Dilute either Scalecide, the best oil emulsion, 1 part to 15 parts of water; or Lime Sulphur, if dry, 1 lb. to 12½ gals.; if liquid, 1 to 9.

"Delayed Dormant"—when buds begin to break but not after leaves are ½ inch long, for Red Mite and Scale. Use same spray as for Dormant, but add 1 oz. Black Leaf 40 to each 6 gals. of diluted mixture for Aphids.

"Pre-Pink"—before blossoms show pink, for Scab, Bud Moth and Tent Caterpillar. Dilute Liquid Lime Sulphur 1 to 50, or Dry Lime Sulphur 1 lb. to 12½ gals. with 1 lb. Arsenate of Lead to each 30 gals. of diluted mixture. Kayso, or Hydrated Lime (Sanilime) may wisely be added to avoid a danger of burning.

"Pink"—After blossoms have separated in the cluster, but before they open, for Scab, Red Bug, Aphids, Tent Caterpillar and Leaf Roller. Same as for Pre-pink, with 1 oz. Black Leaf 40 added to each 6 gals. of diluted mixture.

"Calyx"—After 90% of blossoms have fallen. (Never spray while the fruit buds are fully

open, for you spoil the set of fruit and may poison bees.) Use same materials as for Pre-pink, but increase Arsenate of Lead to 1 lb. to each 25 gals. of diluted mixture for Codlin Moth, Curculio, Gypsy Moth and Scab.

For Later Sprays—consult your Experiment Station Bulletin.

PEACHES.

"Fall Dormant"—for Leaf Curl, dilute Liquid Lime Sulphur 1 to 14, or Dry Lime Sulphur 1 lb. to 6 gals. of water.

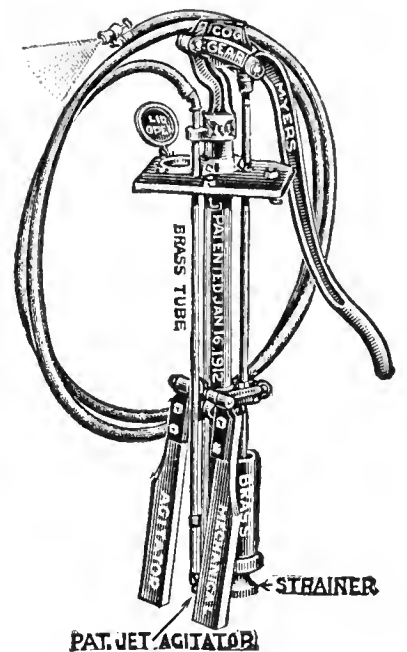

"Spring Dormant"—for Red Mite and Scale before buds start to swell. Dilute Scalecide, the best oil emulsion, 1 part to 15 parts of water.

"Pink"—for Brown Rot when blossoms show pink, use Wettable Sulphur, 1 lb. in 20 gals. of water.

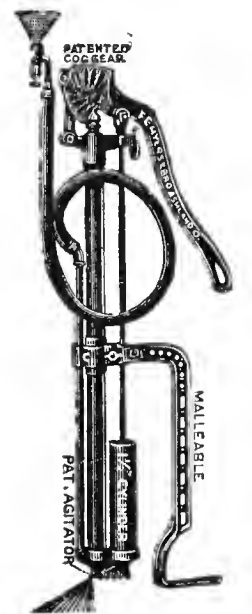

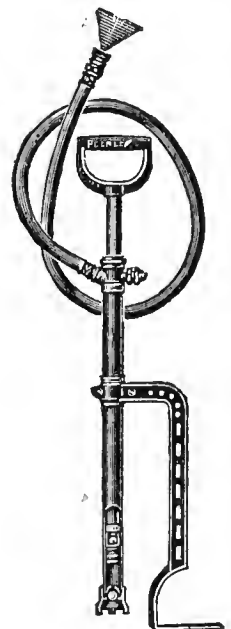

"Shuck"—for Brown Rot and Scab when shucks are splitting. Repeat Pink Spray.

"First Cover"—for Brown Rot, Scab and Curculio a week or ten days after Shuck Spray use Wettable Sulphur, as in previous sprays, adding 1 lb. Arsenate of Lead and 2 lbs. Hydrated Lime (Sanilime) to each 50 gals. of water.

"Second Cover"—Two weeks after First Cover for Brown Rot, using same spray as for Pink.
